

DEMO DATA — FOR ACADEMIC PROJECT USE

Document: Flood Response Guidelines (Synthetic, Page-numbered for citation demo)

Page 1: Introduction

Flood is a disaster that occurred in Salem District during the monsoon season. The flood affected Area A, Area B, and Area C. Emergency responders should prioritize evacuation of low-lying areas first.

Page 2: Evacuation Procedures

The Fire and Rescue Department is responsible for Rescue Operation. The Police Department is responsible for Evacuation and Crowd Control. Responders should use rescue boats where roads are submerged. The District Disaster Management Authority is responsible for Coordination of all evacuation activities.

Page 3: Shelter Allocation

Shelter A is located in Area A and can accommodate 600 people. Shelter B is located in Area B and can accommodate 1000 people. Shelter B has drinking water and medical support available. Shelter C is located in Area C and can accommodate 400 people. Shelter D is located in Area A and can accommodate 300 people.

Page 4: Resource Requirements

Flood requires Drinking Water, Food Packets, Medical Kits, Blankets, and Rescue Boats. The Local Volunteers and NGOs are responsible for Food Distribution and Shelter Support. Drinking water shortages are common in the first 48 hours after a flood; district authorities should dispatch water tankers immediately.

Page 5: Disclaimer

This document is a synthetic academic guideline created for a final-year GraphRAG demonstration project. It does not represent an official government publication and must not be used for real emergency response.
